1

### **DETAILED ACTION**

1. This action is responsive to communications: the application and the IDSs filed on 6/15/00.

2. Claims 1-14 are pending in the case. Claims 1, 8, 12 are independent claims.

# Specification

3. The specification is objected to since it discloses information inconsistent with the information in the drawings. Specifically, the "stored disk instructions **24**" (specification, page 7, line 6) and "stored on the disk **24**" (specification, page 13, line 21) does not match the "Disk **23**" (figure 1). Correction is required to make the information to be consistent in the specification and the drawings.

### Claim Objections

4. Claims 13-14 are objected to because of the following informalities: the "9" within "the article of manufacture of claim 9" (line 1 of these claims) is a typographical error.

Claims 13-14, which are "the article of manufacture", must be dependent on claim 12 (which is an article of manufacture), not claim 9 (which is a method claim). Appropriate correction is required.

# Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. Claims 1, 6-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weingarden et al. (US Pat No. 6,164,975, 12/26/00, filed 12/11/98) in view of Bernardo et al. (US Pat No. 6,185,587 B1, 2/6/01, filed, 6/19/98) and Pacifici et al. (US Pat No. 6,230,171 B1, 5/8/01, filed 8/29/98).

Regarding independent claim 8, Weingarden discloses:

- creating a user profile indicative of an optimum mode of learning (col 7, lines 10-41, 53-67: a cognitive profile of a user <u>is built</u> based on the various learner records by the Learning System where the learner records are the summary of the user's preference optimized by the system; col 7, lines 23-41: a user profile

Application/Control Number: 09/594,507 Page 4

Art Unit: 2178

created from the information gathered from the learners, actually the users, based on the learner responses to the questions made by the learning system)

 providing a web page to a user that matches the user's optimum mode of learning based upon an identifier of the user's profile (col 7, lines 41-52: providing to a user the version of a web page that best matches the cognitive style of each user based on the cognitive profile)

# Weindgarden does not disclose:

- creating document templates using industry standard syntax
- creating content in a standard industry language
- creating style sheets in a standard format mapped to the content to the different modes of learning
- combining the content file with the style sheets to generate a web file

#### Bernardo discloses:

- creating document templates using an industry standard syntax (col 2, lines 42-57, col 3, lines 6-25, figure 5, col 7, lines 32-54: the fact that the website Help facility including the <u>standard and custom website objects</u> to help a website creator to use the templates and other tools to create a website where a website is a homepage for a business company or an industry company inherently shows that the templates created comply to an industry standard syntax)
- creating content in a standard industry language (col 2, line 58 to col 3, line 25; figure 3, #14-16, 20; figure 6; col 7, line 55 to col 8, line 18)

Application/Control Number: 09/594,507

Art Unit: 2178

- generating a web page that matches the selected options/features of a website creator (col 2, line 58 to col 4, line 8; figure 3, #6-22)

Weingarden and Bernardo do not disclose:

- creating style sheets in a standard format mapped to the content to the different modes of learning
- combining the content file with the style sheets to generate a web file

## Pacifici discloses:

- creating style sheets in a standard format mapped to the content to the different modes of learning (col 9, line 59 to col 10, line 7: the style sheet is defined or setup based upon the user preferences to affect the appearances of the HTML document where the user preferences profile is created via a learning process by collecting responses for the questions made by the system)
- combining the content file with the style sheets to generate a web file (figure 6 and col 9, line 19 to col 10, line 7: the style sheet and the content are combined to generate a web file as disclosed in figure 6)

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Pacifici into Bernardo and Weingarden for the following reason. Pacifici teaches creating the style sheets for a HTML document *upon the user preferences* and using the style sheet to *generate the appearance of the HTML document* providing the advantage of applying the style sheets to the content data to generate a web file that matches the user's optimum mode of learning based on the user's profile in Weingarden and to create templates and content for a web document

based on a user profile as in Bernardo since as mentioned above the creation of the user profile in Weingarden and Bernardo is based on the information gathered for the learning process.

Page 6

Regarding claim 9, which is dependent on claim 8, Weingarden discloses calculating a user's profile based upon responses to a questionnaire and a cognitive learning theory (col 7, lines 23-41 and col 10, line 25 to col 11, line 47: computing vector of weights for a user profile created from the information gathered from the learners, actually the users, based on the learner responses to the questions made by the learning system).

Regarding claim 10, which is dependent on claim 8, Weingarden discloses calculating a user profile as a vector of weights (col 10, line 25 to col 11, line 47: computing the vector of weights for a profile based on a user's cognitive preferences).

Regarding claim 11, which is dependent on claim 8, Weingarden discloses providing a user information defined by the style sheets and user profile in an HTML file based upon a HTTP cookie or URL string with an encoded profile identifier or user name (col 7, lines 41-52: using a cookie stored in a user computer to determine the version of the web page that best matches the cognitive style of the user where the cognitive style in the user profile controls the version of a HTML document).

Art Unit: 2178

Claims 1, 6-7 are for a system of method claims 8-11, and are rejected under the same rationale.

Claims 12-14 are for an article of manufacture of method claims 8-11, and are rejected under the same rationale.

8. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weingarden in view of Bernardo and Pacifici as applied to claim 1 above, and further in view of Boag et al. (US Pat No. 6,589,291, 7/8/03, filed 4/8/99).

Regarding claims 2-5, the claims further mention that the industry standard is the Document Type Definition syntax, the content is created using Extensible Mark-Up Language (XML), and the style sheet is created using the Extensible Style Sheet Language (XSL) instead of the Hypertext Mark-Up Language (HTML) and Cascade Style Sheet (CSS) as in Weingarden and Pacifici.

Boag discloses that XML is emerging as a powerful methodology for representing document content and its style sheet XSL is used for transforming documents encoded in one markup language to another markup language such as HTML or WML (col 2, lines 20-42).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Boag into Weingarden, Bernardo and Pacifici to expand the employment of HTML and CSS to XML and XSL since in Boag, a markup language

Art Unit: 2178

can be transformed from one to another, and XML and XSL are merely the extensible markup form of HTML and CSS.

#### Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sutcliffe et al. (US Pat No. 6,253,216 B1, 6/26/01, filed 6/13/97).

Desai et al. (US Pat No. 6,618,746 B2, 9/9/03, filed 3/30/98).

Chidlovskii et al. (US Pat No. 6,327,590 B1, 12/4/01, filed 5/5/99).

Maxwell et al. (US Pat No. 6,589,290 B1, 7/8/03, filed 10/29/99).

Shambroom (US Pat No. 6,301,661 B1, 10/9/01, filed 6/19/99, priority 2/12/97).

Kawasaki (US Pat No. 6,539,375 B2, 3/25/03, filed 8/4/99, priority 8/4/98).

Masters (US Pat No. 6,374,300 B2, 4/16/02, filed 7/15/99).

Millier et al. (US Pat No. 5,899,995, 5/4/99, filed 6/30/97).

Augenbraun et al. (US Pat No. 5,797,001, 8/18/98, filed 8/26/96).

Kurtzman, II (US Pat No. 6,044,376, 3/28/00, filed 4/24/97).

LaMacra et al. (US Pat No. 6,279,013 B1, 8/21/01, filed 7/20/98).
